

Environmental Policy

As an international clean energy leader, Energy Developments (EDL) considers sound environmental management and a commitment to sustainable development practices to be a core component of its business strategy.

Through the implementation of this policy, EDL will strive to:

- Ensure that environmental considerations form part of its business planning and decision making processes;
- Be aware of and comply with applicable laws, regulations and standards pertinent to our industry;
- Identify and reduce risks at design, construction and operational stages of development;
- Utilise and maintain efficient and appropriate technology in its developments;
- Periodically review environmental performance and maintain compliance with licence conditions;
- Periodically train staff to promote environmental awareness; and
- Communicate with government and others on issues of environmental management.

At EDL environmental leadership and adherence to this Environmental Policy is the responsibility of all employees and its contractors, suppliers and vendors.

This policy will be reviewed annually to ensure that it remains relevant and appropriate to the nature of the undertakings conducted by EDL.
